

Discuss what you consider the most important *dos* and *don'ts* when giving peer feedback.

First of all, we should prepare well before giving peer feedback. We need to know comprehensively what the topic, the content and the conclusion are about on peer's work. Only, in that case, we can give constructive opinions. (dos)

Second, we should not assault anyone. We need to keep a positive voice and encourage others to improve rather than just comment on the weakness and blame them. We should respect other's work and help others to produce better work. (don'ts)

Third, we should avoid a fixed mindset when giving opinions. There are a thousand Hamlets in a thousand people's eyes. Respect other's work and try to think in their way even if you are not used to their way of thinking. Try to be open-minded and embrace more thoughts. (dos)

Fourth, be clear for your feedback. Use precise and cautious language when giving feedback. Express your idea correctly and don't cause any misunderstanding. Your feedback should be useful. (dos)

Last, avoid using too judgmental words. For example, "what if you...." sounds better than "....is not good". The judgmental language might harm others mentally. (don'ts)

What will make your peers' feedback most valuable to you?

I hope I not only get negative or positive opinions but constructive ideas on my work. For example, where I can improve to make the work better. I also value different thoughts on particular questions, I hope I get a different way of solving questions. (250)
