Specific:
Goal**:** My goal is to write 2 blogs about statistical theorem and methods over the next two months on the website I created. I want to show people the magic of statistics by creating my blogs and share my ideas over my of statistical learning.

The Resources I might use: past course textbook, past lecture slides and
www.statisticshowto.com

Measurable:
Defining success: Write a blog entry every 4 weeks about my favourite statistical theorem or method I want to share with others and publish it on my website for the blog. Overall, in my total of 2 blogs, getting likes or comments beyond 20 is considered as successful.

Measuring my progress: I will keep an eye on my website to check the comments and likes every week. I will measure my progress by how many likes or comments I have received until a total of 20+. I will keep all my searched materials in a desktop folder and check how many materials I have collected after accomplishing 2 blogs.

Attainable:
I wrote blogs for our class back in high school so I think I can successfully win this task. Besides, I have learnt enough statistical knowledge so I can write blogs with great content. Overall, the goal is reasonable to achieve.

Possible steps I need to take:
1. choose the topic I like and familiar with 2. search the relevant materials about the topic 3.think of the structure of my blog 4.write the blog-publish it

Potential problems: There are due dates of other courses that I cannot write my blogs. I may have to write my blogs whenever I have spare time. In an extremely busy period, I may have to delay the writing by a few days.

Relevant:

Personal relevance: We can learn from the past. Through the procedure of writing blogs, I will have a deeper understanding of a special theorem. Although I have learnt the knowledge in the past, share thoughts with others will help me recall them and get some new ideas. It is always a good thing to share things with others and I hope I can get other's replies to my blog to help me further understand the whole statistics world. The writing procedure also helps my professional writing skills which are useful in my future graduate studies.

Time-bounded:

Start from Feb 15th, search topic and material on that day and write the first blog on Feb 16th. If I want to delay the writing, accomplish it no later than Feb. 20th. Search topic and material on Mar. 17th and write the second blog on Mar. 18th. If I want to delay the writing, accomplish it no later than Mar. 25th.

Conclusion: I will write 2 blogs about statistics from Feb 15th to Mar. 25th. By creating such blogs, I can improve my writing skills as well as share my ideas with others. Their comment will help me better understand the statistical world.
